Titre	Two-Year Survival Comparing Web-Based Symptom Monitoring vs Routine Surveillance Following Treatment for Lung Cancer
Type de publication	Article de revue
Auteur	Denis, Fabrice [1], Basch, Ethan [2], Septans, Anne-Lise [3], Bennouna, Jaafar [4], Urban, Thierry [5], Dueck, Amylou C [6], Letellier, Christophe [7]
Editeur	American Medical Association (AMA)
Type	Article scientifique dans une revue à comité de lecture
Année	2019
Langue	Anglais
Date	22 Janv. 2019
Numéro	3
Pagination	306-307
Volume	321
Titre de la revue	JAMA
ISSN	1538-3598
Résumé en anglais	Symptom monitoring during chemotherapy via web-based patient-reported outcomes (PROs) was previously demonstrated to lengthen survival in a single-center study. ¹ A multicenter randomized clinical trial compared web-based monitoring vs standard scheduled imaging to detect symptomatic recurrence in patients with lung cancer following initial treatment. A planned interim analysis (9-month follow-up) found a significant survival benefit (19-month survival in the PRO group vs 12 months in the control group). ² We now present the final overall survival analysis.
